EYEON PRODUCT PROCESS INDUSTRY INVENTORY SERVICES

The best possible forecast!

Companies in the process industry are facing volatile customer behavior. In a market with growing complexity and pressure you need to keep availability high and inventories low. High-quality and effective planning will give you a competitive advantage. This requires a high forecast accuracy but also properly tuned inventory settings, as a forecast will always be wrong. Typically, a solid planning process requires well-educated and highly skilled planners. Talent is hard to find nowadays. With EyeOn Forecast Services your worries are over.

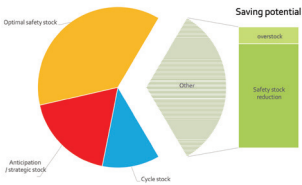

Why outsource to Forecast Services?

EyeOn Forecast Services is a Business Process Outsourcing service. Our specialists analyse the data to optimize safety stock levels for the entire supply chain. Our optimized inventory-setting techniques allow you to offer a high level of customer service with lower inventory levels. All important factors, including supply uncertainty, replenishment lead times and demand volatility, are fully accounted in safety stock targets*. The result is high process efficiency, continuity and improved performance. Allowing your planners to focus on key value drivers, such as optimizing asset utilization, supply plans as incorrect inventory settings do not disturb the planning processes.

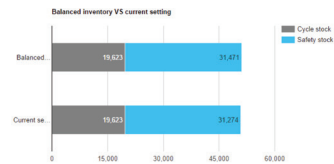

*For complex supply chains EyeOn Forecast Services also provides multi-echelon optimization.

Current inventory breakdown

Balanced inventory VS current setting

As a third-party service provider, we continually invest in new technologies and skills. We translate our wide and in-depth experience with various leading global companies into best practices your company can use to perform better.

Our 3 proven steps to accurate forecasting:

1. Proof of concept

We deliver:

- A segmentation of your product portfolio(s) with differentiated inventory settings
- Optimal inventory strategy and inventory policies
- A solid and proven implementation approach.

2. Design & Configure

We deliver:

- An end-to-end tested secure safety stock setting process
- A state-of-the-art EyeOn inventory engine using your data
- Dashboards tuned to your business needs.

3. Execute:

We deliver on a periodical basis:

- A product segmentation update
- Reliable safety stock settings
- Reporting
- Hands-on support in continuous performance and process improvement.

EyeOn Forecast services deliver business benefits that boost sales:

- Optimize inventory and improve service levels.
- Optimize your planning organization.
- Focus your resources on areas where attention is needed.
- Lower your company's operating costs.
- Innovate your 'planning capability' faster.

How can we help you?

Lighten your load. Let us assist you in managing complex supply chain and planning processes. Make use of our high quality planning and modelling resources to get ahead. Give your team the opportunity to focus on value-added activities that enable your company to stand out from the rest.
