# EyeOn product Boost your APS performance

Many companies use planning tools that have been implemented several years ago. Models and parameters have been set at the start, but often not adapted to rapidly changing dynamics. Moreover, everybody seems to embrace advanced analytics to get grip on this evolving environment, and companies are afraid to fall behind.

APS vendors are fuelling this fear by promoting next generation tools as thé solution. Next to the traditional APS vendors 'new kids on the block' are emerging, making it even more difficult to make a choice. Besides, only few companies already have a good view on how advanced analytics could give them a competitive advantage and dread to start the IT journey.

Easy access to advanced analytics right now

The good news is that companies can buy time, while getting access to the latest advanced analytics capabilities. This can be achieved by plugging-in proven analytics (system of innovation – highly adaptive) into their current APS (system of differentiation - delivering competitive advantage) and/or ERP system (system of record - does not have to be unique).

**Connect proven analytics with current APS / ERP**

Systems of innovation

Systems of differentiation - APS

Systems of record - ERP

EyeOn product Boost your APS performance

Advanced analytics offered
Typical analytics to tap into involve:
- Advanced forecasting: best possible forecast based on internal and/or external data sources using latest statistical techniques
- Inventory optimization: optimized single/multi-echelon inventory parameter settings using unique analytical models
- Supply chain data engineering: the right planning master data (e.g. realistic lead times) determined via advanced data mining

Honeycomb platform
Our services all run on Honeycomb: our data science platform for advanced forecasting, inventory optimization & scenario analysis. Honeycomb combines state-of-the art data science capabilities like data preparation, modeling, machine learning & analytics and visualization with a secure and fully scalable data storage environment.

3 steps to tap into advanced analytics
It takes just 3 steps to connect:
- Step 1 Proof of concept
  - What could be achievable by using advanced analytics?
  - How to connect fit-for-purpose?

- Step 2 Design & configure
  - Analytical engine configured to your needs
  - Secure end-to-end process, fully tested
- Step 3 Execute
  - Optimized output & actionable business insights
  - Structural process monitoring
  - Continuous improvement

Why connecting to managed services
By connecting to our managed services planning performance gets an instant boost. It enables planners and the organization to get acquainted with next level planning capabilities. And delivers insights to your specific future planning needs, to shape your future planning landscape at their own pace.

How can we help you?
Lighten your load. Let us assist you in managing complex supply chain and planning processes. Make use of our high-quality planning and forecasting resources to get ahead. Let our training programme and customized coaching enable your team to run its own high-quality forecasting and planning process.

Interested?
You can contact us at forecastservices@eyeon.nl for more information or to make an appointment.

Our promise
We implement proven innovations to raise your forecasting and planning performance. We work in the most pragmatic way possible, based on our knowledge and experience in over hundred large, international companies. We develop and implement the best fit-for-purpose improvements with real impact.
